

SERIES 4500T
THERMALLY BROKEN ALUMINIUM
BALCONY SLIDING DOOR

SPECIFICATION

I. GENERAL.

Aluminum balcony sliding door shall be Starline 4500T sliding door Series
Manufactured by: Starline Architectural Windows Ltd.
Head office: 9380 – 198th Street, Langley, B.C. V1M 3C8

APPLICATION

A high-quality thermally broken aluminum balcony sliding door designed for residential high rise construction.
This series is available with seismic jambs, with exterior extruded aluminum glazing stops at the fixed lite and an exterior sliding ventilator.

DESCRIPTION

Work included: Furnish labor, material and other services to complete the fabrication and installation of the doors, including all materials and fittings required for the operation of the units in the manner, direction and performance shown on the shop drawings and specified herein.

Work not included: Structural support of door framing, interior trims. (Specifier list others).
Related work specified elsewhere: (Specifier list).

QUALITY ASSURANCE

Drawings and specifications for work of this section are based upon 4500T doors as manufactured by Starline Architectural Windows Limited. Whenever alternative products are offered, submit supporting technical literature, samples, drawings and performance data for comparison 10 days prior to closing date. Test reports must be made available on request.
Doors shall be tested and conform to the AAMA/ WDMA/ CSA 101 I.S.2/ A440-05 requirements.

TESTING AND PERFORMANCE

(Specifier to select the performance requirements from the following options)

1. Limit mullion deflection to L/175.
2. Allow for deflection of building structure. Aluminum door frames with deflection channel and seismic jambs shall be designed, fabricated and installed to withstand slab edge vertical differential deflections of maximum 3/4" and seismic inter-story lateral drift movements of Delta S +/- 3/4" without significant damage to the fenestration system or Delta M +/- 1 1/2" with significant damage expected but framing to be designed to remain anchored to the structure.

Doors shall meet performance class SD-LC25 when tested to AAMA/ WDMA/ CSA 101 I.S.2/ A440-05:

1. Door air infiltration shall not exceed 0.01 cfm/ft² (0.01 L/s*m²) when tested in accordance with ASTM E 283-04 with a pressure difference of 1.57 PSF (75 Pa)
2. There shall be no water infiltration for doors when tested in accordance with ASTM E547-00 and ASTM E331-00 with a pressure difference of 8.25 PSF/ 400 Pa (Laboratory Test) and 6.00 PSF/ 287 Pa (Field Test).
3. Structural performance shall be based on CSA Standard CAN3-S 157 "Strength Design in Aluminum" and a maximum deflection of L/175 of the span.

The deflection of door shall not exceed L/175 and there shall be no permanent set when tested in accordance with ASTM E330-02 with a design pressure of 25 PSF.

4. Door shall meet grade 20 when tested to ASTM F842-97 and comply with CMBSO 1-79/ CAWM 300-89, Forced Entry Resistance Test.
5. The door thermal transmittance U-value shall be 0.46 BTU/ hr*ft²*°F (2.1 W/m²*K) when tested in accordance with AAMA 1503.1 and CAN/CSA-A440.2.

Window shall be tested and labeled to N.F.R.C. standard 100 & 200 2004.

(Note to specifier: Thermal performance depends on glass specified. Above test was performed using 20mm double glazed insulated glass unit with low E-coating on surface #2, air filled with aluminum spacer bar and a test size of 78 3/4" x 78 3/4" (200cm x 200cm).)

BALCONY SLIDING DOOR

MAINTENANCE AND GUARANTEE

Provide data for maintenance and cleaning in accordance with instruction under general conditions.

Provide a written guarantee for the complete installation provided under this section against defective material and workmanship which appears within a period of two years from the date of substantial completion.

II. PRODUCTS

MATERIAL

Frame member and intermediate bars are extruded from aluminum sections of 6063 alloy, T5 temper with a minimum thickness of 0.063". Fastener shall be stainless steel of sufficient size and quantity to perform their intended function.

Glazing gaskets shall be extruded santoprene.

Glass Setting Blocks & Edge Blocks shall be FPVC, Neoprene, EPDM, Santoprene or silicone with an 80 to 90 ± Shore A durometer hardness. Block material shall be compatible with sealed unit edge sealant. Setting blocks for sealed units with silicone edge seals must be silicone.

Glazing bead shall be extruded aluminum and glazed from the outside.

Thermal break shall be Polyamide.

FINISH (POWDER COATING)

All exposed surfaces of aluminum window and framing members shall be free of scratches and other serious surface blemishes.

Standard

1. Interpon© D1010 thermosetting coating specifically designed for Architectural Systems that meets the AAMA 2603-02 specification that covers pigmented organic coatings on aluminum extrusions. Standard color is Standard White (GA104Q).

Option

1. Interpon© D3000 thermosetting fluorocarbon coating specifically designed for Architectural Systems that meets the AAMA 2605-02 specification that covers pigmented organic coatings on aluminum extrusions. The AAMA 2605-02 specification demands advanced levels of weather resistance, combined with excellent chemical, mechanical and anti-corrosion performance along with the maximum gloss and color retention.
2. The following semi standard colors are available:
 - Beige
 - Black Charcoal
 - Bronze
 - Graphite Grey
 - Gray Velvet
 - Grey Charcoal
 - Hartford Green
 - Iron Mountain Gray
 - Light Bronze
 - Metal Shavings Grey
 - Sea Wolf Gray
 - Standard Black
 - Standard Brown
 - Standard Silver
 - Terra Cotta

BALCONY SLIDING DOOR**

FABRICATION

Fabricate framing from extrusions of size and shape shown on shop drawings. Interior and exterior extruded aluminum framing sections shall be integrated with a Polyamide thermal break to form a rigid composite assembly without the use of fasteners or other thermal bridging elements. Dry shrinkage of polyamide thermal break shall not exceed 0.10% of the framing member length.

Main framing shall be designed for mitre corner construction. Sliding ventilator shall be designed for butt corner construction. All framing joints shall be accurately machined, assembled and sealed to provide neat water- and airtight connection. Coupling mullions shall be designed to provide a functional split to permit modular construction and allow for thermal expansion.

Sliding ventilator shall be 1 3/8" deep and shall have a minimum wall thickness of .063" (1.60mm) and be thermally broken.

The frames shall be 4-1/2" in depth with a minimum wall thickness of .063" (1.60mm) and be thermally broken.

All frame corners are mechanically joined by stainless steel screws. All interior joints and interior screw heads shall be sealed with a non-hardening sealant. Sliding ventilator shall have a single Mohair weather strip with fin seal at the interlock. The sill, the head and the jamb at the frame shall have a Mohair weather strip with fin seal.

Glass bead shall be snap-in screw less type at the fixed lite. The slider lite is glazed with an insulating glass with a full perimeter flexible Santoprene glazing gasket.

GLAZING

The 4500T series aluminum sliding doors shall be double glazed, double seal insulated glass unit with an overall thickness of 13/16" (21 mm).

Glass thickness and quality shall conform to the requirements of the U.S.A. and Canadian Code for commercial construction, current edition. Minimum Glass thickness shall be 4mm. Glass shall be tempered or laminated.

HARDWARE

Hardware for the aluminum sliding doors and door frames shall be furnished by the door manufacturer. Where practical, all hardware fittings shall be installed at the factory before shipping.

Hardware shall be as follows:

Sliding panel shall slide on adjustable ball bearing steel wheels and shall be equipped with a hook latch-locking handle that positively engages with an adjustable keeper at the frame jamb. Sliding doors shall have interior and exterior handles of high impact plastic material. Handles are available in black or white.

OPTIONAL ITEMS

(Specifier to select from the following options)

1. Glazing – Tinted & reflective, LowE performance coating, laminated glass, obscure, Stainless steel spacer bar, dark bronze aluminum spacer bar
2. Deflection channel
3. Side Lights & Transoms
4. Separate colours on the inside & outside
5. Insect screen
6. Foot lock

III. EXECUTION

INSTALLATION

Doors shall be installed, glazed and adjusted by experienced personnel in accordance with the manufacturer instructions and approved shop drawings. All items in this section shall be set in their correct location and shall be set level, square, plumb and at proper elevations and in alignment with other work.

PROTECTION AND CLEANING

Aluminum shall be isolated from concrete, mortar, plaster and dissimilar metals with bituminous paint or other isolation coatings. It shall be the responsibility of the general contractor to maintain protection and provide final cleaning.

**Laws, building and safety codes governing the design and use of this product vary widely.
Starline Architectural Windows Ltd. does not control the selection
And use of this product and assumes no responsibility therefor.**
